

The Science of the **Genius** Mind

by Lamar L. Irwin, RScP, CSMI

“Everyone is born a genius, but the process of living de-geniuses them.”

-Buckminster Fuller

BRAIN FREQUENCY

*Brain frequency cycles per second

Thomas Edison, the American inventor who holds the record for the number of patents, had a method to receive creative solutions to his inventing problems. Edison placed metal plates on the floor and would hold two metal balls in his hands as he sat in a chair. He knew that when he sat in the chair contemplating the problem in his awareness and relaxed and began to fall asleep, his hands would open and the balls would fall into the metal plates and wake him up. At this moment he would most likely have the solution to the problem he had in mind.

Was Thomas Edison a special human being? Can anyone do this— access the information in the Quantum Intelligence?

Edison, Albert Einstein, George Washington Carver and others were not special. Anyone can do this. Answers to all problems lie in the quantum intelligence, just waiting to be accessed. All that is required is to train the mind.

The training our society values is the kind that trains the left hemisphere of the brain to be more logical and to manipulate objects and ideas in this physical plane. What's required is to train the right hemisphere, the creative side of the brain, to access creative solutions, have the tools to think outside the box, and be innovative by choice.

All questions contain the seed of the answer. All people contain the seed of a genius mind. The secret ingredient is a sincere desire.

There are four frequency ranges within which the brain operates, beginning with the objective world, where the boundaries of time and space exist— where it takes “x” amount of time to drive to work, for instance.

At the **Beta** level of awareness, you observe through the five senses to navigate the physical plane.

Alpha level awareness has the capacity to see the infinity of possibilities, since creativity is only bound by the thinker's limiting thoughts. No time and space boundaries exist in this Inner Conscious Level.

Theta is the frequency of our biological intelligence, which was the dominant frequency when some of a person's very young experiences occurred.

Delta is generally relegated to “we don't know”, or is considered the gateway to the other side.

Visualization and imagination are the faculties used to develop the genius mind, the tools that are used for navigating the creative realm of non-locality of time and space. Outside stimuli is shut out so that the senses can be projected to any place— microscopic, macroscopic and within— and any time, past, present and future.

All that's needed then is to establish specific points of reference to link the subjective experience with a related objective world experience. To clarify, each person has a database of points of reference that link the objective senses to objective items and experiences; for example, you're shown a green flash card and told it is “green”. That occurred for every single aspect of what your beta level of awareness now allows you to see.

When you do mind-directing exercises that link the inner senses to objective world points of reference, you've established a sign post in the inner conscious level for navigation. The more you practice, the more you operate within the creative realm of life and generate creative solutions. As Albert Einstein said, imagination is more important than knowledge.
